# ISHIGAKI - JAPAN

## Special Group Departure

At 1,956 km from Tokyo, Ishigaki is closer to Taiwan than to its own country's mainland. Diving in Ishigaki, Japan, is renowned for its exceptional underwater experiences, making it a top destination for enthusiasts and professionals alike. Located in the Okinawa Prefecture, Ishigaki Island is part of the Yaeyama Islands group, which offers some of the most pristine and biodiverse marine environments in Japan.

One of the primary draws of diving in Ishigaki is its vibrant coral reefs. The island is surrounded by a vast expanse of coral gardens that are home to an impressive array of marine life. Divers can explore colorful coral formations and encounter a variety of species, from majestic manta rays to schools of tropical fish. The clarity of the water often exceeds 30 meters, providing breathtaking visibility and an immersive experience in the underwater world.

Another highlight is the opportunity to dive with manta rays. Ishigaki is one of the few places in Japan where these graceful creatures can be reliably seen year-round. The famous Manta Scramble site is a must-visit, where divers can witness manta rays gliding effortlessly through the water, often feeding in the nutrient-rich currents. The sheer size and beauty of these rays create a memorable and awe-inspiring experience.

Ishigaki's underwater ecosystem is also enhanced by its unique topography, which includes dramatic underwater cliffs, swim-throughs, and caves. These features provide a diverse range of diving environments, catering to various skill levels and preferences.

Additionally, Ishigaki is known for its warm waters and pleasant weather, making it an attractive destination throughout the year. The combination of vibrant marine life, crystal-clear waters, and unique dive sites makes Ishigaki a premier diving destination, offering unforgettable experiences for divers of all levels.
